

TARGET CHEMICAL ELIMINATION DISCLOSURE

Arcadia and Encore are committed to producing sustainable, high-quality products that meet the stringent environmental and human health standards outlined in the BIFMA LEVEL® certification program. As part of this commitment, we actively evaluate and eliminate certain chemicals of concern from our products as follows.

Eliminated Chemicals

We have phased out and no longer utilize the following chemicals in the manufacture of our products:

- Antimicrobials (intentional addition of antimicrobial agents in finishes, coatings, and foam)
- Formaldehyde (added formaldehyde in composite wood products, adhesives, and finishes)
- Flame Retardants (halogenated flame retardants in foams and other materials)

Targeted Phase-Out Chemicals

Additionally, we have taken steps to identify and reduce, with the ultimate goal of eliminating, the use of the following chemicals:

- PVC Vinyl
- PFAS (per- and polyfluoroalkyl substances)

We ensure compliance with these chemical restrictions through:

- Material Safety Data Sheets (MSDS) and supplier declarations
- Third-party testing and certification where applicable, including SCS Indoor Advantage Gold certification for the majority of Arcadia and Encore products
- Ongoing product development and material innovation

Please note that while PFAS has been eliminated from the vast majority of textiles produced by our textile partners, some fabrics may still contain antimicrobials, PVC vinyl or other chemicals of concern. It is the responsibility of the customer to review the chemical contents when specifying a fabric.

We continue to assess new materials and manufacturing processes to further improve environmental responsibility while maintaining the durability and performance of our products. For additional details on our sustainability initiatives and chemical management policies, please contact us at 800.585.5957 or askus@arcadiacontract.com.
