

AVELINA 2-PIECE TABLE CART DETACHMENT INSTRUCTIONS

IMPORTANT: Each component has a numbering sequence that must be followed for assembly. Note that grain direction will match.

Tables are bolted to the wood cart and should be disassembled at the job site. A drill with a Phillips head and a 5/16" socket for a machine hex screw will be needed to remove brackets.

Step 1: Remove the protective wrap covering to access the L-brackets and angled bracket. Unscrew the 1/4-20 machine screws on the removable panels from the underside of the table (Figure A). Then gently pull the removable panels on the bases away from the table until they are detached completely (Figure B).

Step 2: Gently pull the removable panels (held together with magnets) on the bases away from the table until they are detached completely (Figure B).

Step 3: Using the drill, remove the Phillips head screws that are attached to the cart (Figure C). Then remove the 5/16" machine hex screws that are attached to the table (Figure D).

Step 4: Once the L-brackets and the angled bracket is removed, safely lift the table off the cart using at least four people, and place it in the desired location (Figure E).

Step 5: Carefully remove the (4) screws from the bracket attached to the metal shipping leg, which are located on the underside of the table (Figure F). Discard the metal shipping leg appropriately.

Step 6: With at least four people, carefully attach the add-on table to the starter by aligning the bars and dowels with the appropriate holes and notches. **Make sure to match the number sequences accordingly, e.g. 1:1 or 2:2** (Figure G).

Step 7: Once the table has been securely attached, install table joint connectors underneath the seam of the two tables, which is located below the center base. The number of connectors will vary based on table size (from 1 to 3). Properly secure connectors to the table and level surfaces of each table (Figure H).

Step 8: After installing and leveling the table, re-attach the removable panels starting with the panel underneath the table top. Secure through the middle using a 1/4-20 machine screw (Figure I). Attach base panels (Figure J).
